How do I setup a mobile hotspot on my phone?

To set up a mobile hotspot, follow these steps:

- **<u>Android</u>**:
    1. Turn off the Wi-Fi on the phone
    2. Plug the phone into a power source if possible
    3. Open **Settings**
       Note: Some phones may feature a **Mobile Hotspot** or **4G Hotspot** app. If so, use that instead.
    4. Locate the **Wireless & Networks** section
    5. Tap **More** underneath, then choose **Tethering & Portable Hotspot**
    6. Tap the checkbox for **Portable Wi-Fi Hotspot** or **Mobile Hotspot**
       Note: If the hotspot doesn't activate or the item is disabled, your phone may be incapable of creating a Wi-Fi hotspot or that feature may be unavailable under your carrier's data subscription plan.
    7. Choose **Set Up Wi-Fi Hotspot** to give the hotspot a different name and assign a password if desired
    8. Tap **Save** or **OK** to set your changes
    9. You should now be able to locate the hotspot on your computer
- **<u>iOS</u>**:
    1. Turn off the Wi-Fi on the phone
    2. Plug the phone into a power source if possible
    3. Open **Settings**
    4. Tap **Cellular** or **Settings**
    5. Tap **Personal Hotspot**
    6. Slide the slider for **Allow Others to Join**
       Note: If the hotspot doesn't activate, that feature may be unavailable under your carrier's data subscription plan.
    7. You should now be able to locate the hotspot on your computer
